DETAILED ACTION

Specification

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by Saeki (U.S. Patent No. 6,509,775).

In reference to claim 1 Saeki discloses in Figure 5 a semiconductor circuit, comprising: three or more nodes (A, B, D) at least including one input node (A) and one output node (D); plural paths (the paths being defined by the clock tree layout, see column 1, lines 59-67) connected between the three or more nodes and whose signal propagation directions between the nodes are regulated; signal propagation time delay circuits (4) for establishing a signal propagation delay time for each of the paths; an input unit (10) coupled to the one input node (10) for inputting an input signal to the input node (10); and a detector (5) coupled to the input node (10) for determining a time

required for the input signal to propagate through the paths and arrive at the output node (D).

Allowable Subject Matter

4. Claims 2-17 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. The following is a statement of reasons for the indication of allowable subject matter: Claims 2-7, and 10-17 would be is allowed because the closest prior art of record fails to disclose a circuit as shown in Figure 5 wherein the node comprises a storage unit (510) in combination with the rest of the limitations of the base claims and any intervening claims. Claim 8 would be is allowed because the closest prior art of record fails to disclose a circuit wherein the signal propagation time is changed according to a degree of coincidence or a degree of similarity between two signals to be subjected to matching in combination with the rest of the limitations of the base claims and any intervening claims. Claim 9 would be is allowed because the closest prior art of record fails to disclose a circuit wherein the nodes are arranged in a two-dimensional lattice shape in combination with the rest of the limitations of the base claims and any intervening claims.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
